

Hippies Heaven Lead Generation & Outreach Bot

A comprehensive lead generation and email outreach system for smoke/vape shops in Illinois & Missouri.

■ Quick Start

1. Install Dependencies

```
bash
pip install -r requirements.txt
```

2. Configure Environment

```
```bash
cp env.template .env
```

**Edit .env with your API keys and email settings**

```
```
```

3. Collect Leads

```
bash
python bot.py --mode collect
```

4. Send Emails

```
```bash
```

**Preview first (dry run)**

```
python bot.py --mode email --dry-run --limit 5
```

**Send real emails**

```
python bot.py --mode email --limit 10
```

```
```
```

5. Start Tracking Server

```
```bash
```

```
python pixel_server.py
```

**Dashboard:**  
**<http://localhost:5000/dashboard>**

**PDF Report:**  
**<http://localhost:5000/report.pdf>**

```
```
```

■ Features

- Lead Collection: Scrapes smoke/vape shops from Google Places API
- Email Outreach: Personalized bulk email sending with Gmail SMTP
- Open/Click Tracking: Real-time analytics with pixel tracking
- Dashboard: Live web dashboard showing opens and clicks (<http://localhost:5001/dashboard>)
- PDF Reports: Automated weekly reports via email
- Rate Limiting: Anti-spam protection with configurable delays

■ Configuration

Required Environment Variables (.env)

```
```env
```

## **Google Places API**

```
GOOGLE_API_KEY=your_google_places_api_key
```

## **Gmail SMTP (use App Password)**

```
SMTP_SERVER=smtp.gmail.com
```

```
SMTP_PORT=587
```

```
EMAIL_USER=yourgmail@gmail.com
```

```
EMAIL_PASS=your_app_password
```

# Weekly Reports

```
REPORT_RECIPIENTS=ops@hhbrands.com,va1@hhbrands.com
REPORT_DAY=MON
REPORT_HOUR=9
...`
```

## ***Getting API Keys***

- Google Places API: Google Cloud Console → Enable Places API → Create API Key
- Gmail App Password: Google Account → Security → 2-Step Verification → App Passwords

## ■ Usage Commands

### ***Lead Collection***

```
```bash`
```

Default scan (IL + MO)

```
python bot.py --mode collect`
```

Denser coverage

```
python bot.py --mode collect --km-step 12`
```

Single state

```
python bot.py --mode collect --states IL
...`
```

Email Campaigns

```
```bash`
```

## Dry run (preview)

```
python bot.py --mode email --dry-run --limit 5`
```

## Send batch

```
python bot.py --mode email --limit 10
```

## Send all

```
python bot.py --mode email
...
```

### ***Tracking & Analytics***

```
```bash
```

Start tracking server

```
python pixel_server.py
```

Access dashboard

```
open http://localhost:5001/dashboard
```

Download PDF report

```
open http://localhost:5001/report.pdf  
...
```

■ Output Files

- leads.csv - Raw lead data
- leads.xlsx - Excel format
- leads_call_sheet.xlsx - Call sheet with contact info
- sent_log.csv - Email send log
- tracking_opens.csv - Open tracking data
- tracking_clicks.csv - Click tracking data

■ Email Template

Edit email_template.txt to customize your outreach message. Supports:

- {Name} - Lead name

- {Website} - Business website
- {TrackingPixel} - Open tracking pixel
- {TrackLink:URL} - Click tracking links

■ Analytics Dashboard

The tracking server provides:

- Real-time open/click statistics
- Top 10 performing emails
- Full tracking data table
- PDF report generation
- Automated weekly email reports

■■ Important Notes

- Rate Limiting: Default 30s delay between emails
- Compliance: Includes opt-out language and age restrictions
- Quotas: Monitor Google Places API usage
- Testing: Always use --dry-run first
- Logs: Check sent_log.csv to avoid duplicates

■ Troubleshooting

■ Support
